“Cybersecurity 2020: Welcome to the Digital Cold War” Steve Durbin January 8, 2020

In the year ahead, organizations must prepare for the unknown. They can do so by ensuring they have the flexibility to endure unexpected and high-impact cybersecurity events.

Businesses will need to manage security risks in ways beyond those traditionally handled by the information security function, as well. Increasingly innovative attacks will most certainly impact both business reputation and shareholder value.

Ostrich Strategy

Don’t be fooled

You will be affected by a cybersecurity breach either directly, from a software provider or tool, or a supplier

Action plan

Know the regulatory & compliance obligations of your company

Identify critical assets & data

Assess the level of password protection required

Ensure staff training & education

Seek professional advice from a trusted partner

Define recovery procedures and consider how you will keep your business running in the event of cybercrime

Develop an information security policy based on ISO 27001 standards that is signed off by your Executive Management team & all staff

Talk to your team.

Who manages cyber-security for your organisation? Your Chief Security Officer, IT Manager or ICT Provider

Cyber-Security is always changing & evolving - Stay up-to-date with new threats, collaborate with peers and the wider community

Contrast internal & external opinions - Form your own view on the subject
